Keystone Jack Crimping & Termination Tool

Product Description

A professional-grade punch-down and crimping tool engineered for fast, reliable termination of modular 90° keystone jacks used in structured network cabling. Designed to seat, punch down and trim all eight wires in a single squeeze, this tool speeds up installations and helps maintain tidy, high-quality network connections in patch panels, wall plates and data cabinets.

Key Features

- **90° Termination Head** – Angled design lets you crimp and punch down standard 90° keystone jacks in tight spaces where straight tools struggle.
- **One-Hand Operation** – Seats and trims all 4 wire pairs simultaneously with a single squeeze, cutting termination time and reducing hand fatigue.
- **Ergonomic Grip & Durability** – Comfy handle and solid metal construction deliver consistent, clean terminations while keeping installer strain to a minimum.
- **Neat, Professional Finish** – Built-in cutter trims excess cable for tidy results and lowers the risk of damaging connectors or cable cores.
- **Wide Compatibility** – Works with common modular CAT5e, CAT6 and CAT6A shielded keystone jacks found in UK & EU network installations.
