Thermal Micro-Strip® Precision Fibre Stripper

Product Description

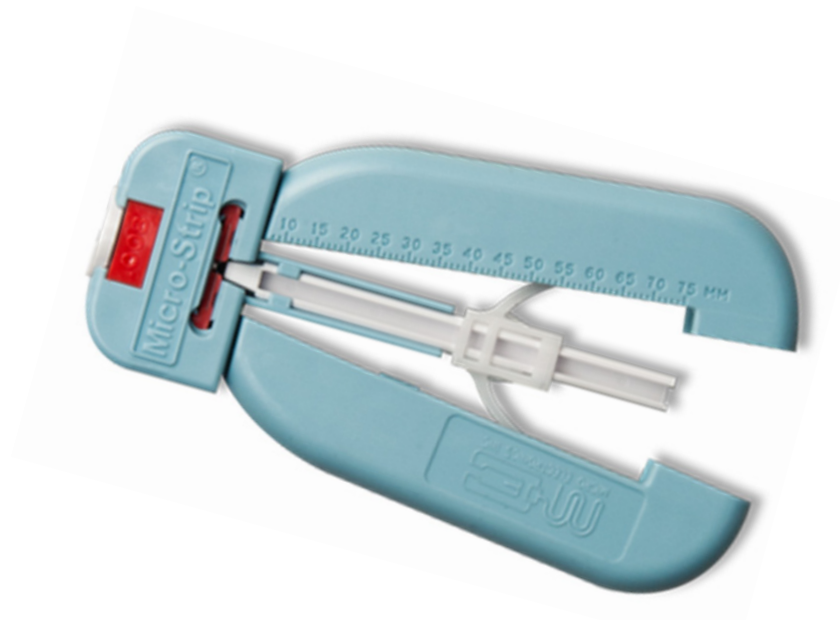

Briticom® provides the Micro-Strip® Precision Stripper, which can strip buffered fibre up to 2360µm, and jacketed fibre up to 3.5mm quickly and easily.

Features & Benefits

- Interchangeable cutter blade sets
- Fibre guides are available, to strip most fibre sizes

Applications

- Fibre optic preparation and termination

A. Handle Assembly

Standard stripping handle accepts interchangeable parts quickly and easily.

B. Fibre Guide

Selected for each nominal diameter of unstripped buffer or cable. Wrong sized fibre will not fit, assuring that fibre is precisely positioned, properly stripped and not nicked or damaged.

H. Spring Assembly

Keeps handles apart, ready for next fibre or cable.

G. Fibre Support Channel

Guides fibre being stripped in a straight line to prevent core damage from flexing and bending. For jacket stripping, cable support channel performs a similar function.

F. Strip Length Guide

Calibrated in 1mm increments for desired strip lengths

E. Cutter Blade Set

Can be selected for each fibre coating or cladding diameter. Opposing blades self align around fibre guide to assure concentric scoring, nick-free fibre.

C. Stripping Force

Applied longitudinally with the fiber. The chance for harmful drag against the blade is virtually eliminated, even with operator inattention or fatigue.

D. Fibre Guide Lock

Holds the fibre securely in position. Color coded to match the cutter blade set.
